Following section mentions a scenario of a project which has been planned to run using the Scrum methodology. Answer Question 1 part (e) and (f) by analyzing this scenario.

Scrum Plan

Product owner of this Scrum team has prepared the product backlog of the new version of their e-commerce web application. According to that, the product backlog items are listed in the following Table 1.

Table 1: Product Backlog

| Priority | Product Backlog Item | Relative Size (Story Points) |
|----------|--------------------------------------|------------------------------|
| 1 | A: Developing User Management Module | 20 |
| 2. | B: Developing Server Handling Module | 35 |
| 3 | C: Preparing Release Notes | 15 |
| 4 | D: Executing Test Cycles | 20 |
| 5 | E: Integrating Payment Gateway | 10 |

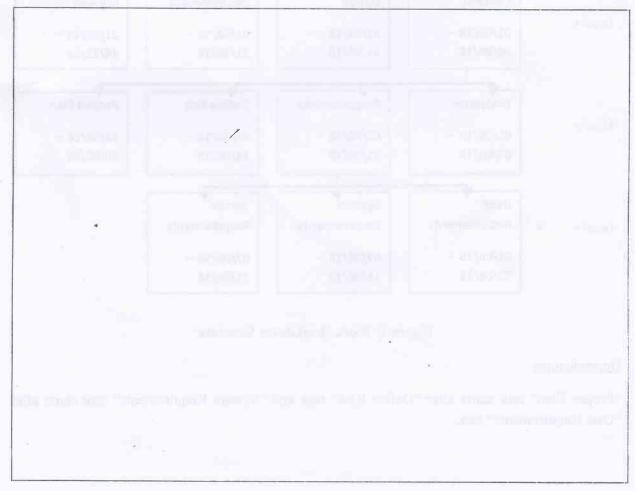

It has been appointed a Dev Team with 8 members for this project. In addition to that, it has been revealed from the past experience that this team can complete 22 story points per sprint. According to the lessons learned from previous similar projects, 20% story points are added per sprint as the uncertainty buffer. Time allocated per sprint is 2 weeks and cost per month has been estimated as US\$ 2,500.

e) Estimate the total number of sprints required to complete this project. Show all steps

g) According to the work breakdown structure of a technically challenged IT project, it has been scheduled to complete system integration task at the end of this month. However, the team has completed only 60% of this task due to the inexperience of using new APIs for programming. The budgeted cost of work scheduled for the current month US\$ 25,000 but US\$ 28,000 has been spent for accomplishing the scheduled task during the same month. Estimate both the <u>Cost Variance</u> and <u>Schedule Variance</u> of this project for the current month. Clearly state all the steps followed. (6 Marks)

Question 02

a) What is the Work Breakdown Structure (WBS)? (2 Marks)

b) Model a <u>Gantt Chart</u> for the Work Breakdown Structure depicted in Figure 1. Clearly indicate the main tasks, sub tasks and dependencies. (4 Marks)

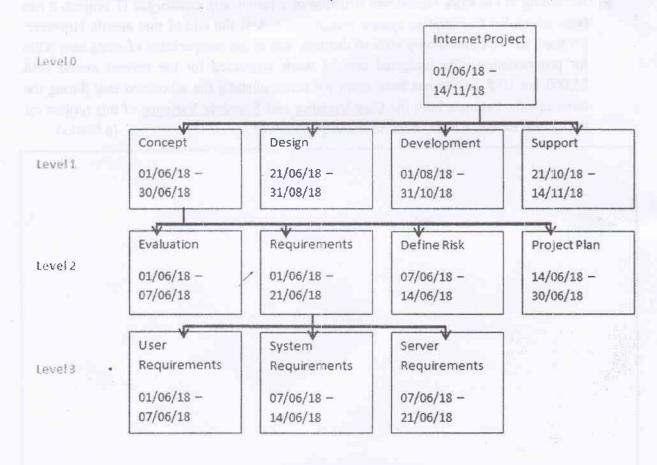

Figure 1: Work Breakdown Structure

Dependencies

"Project Plan" task starts after "Define Risk" task and "System Requirements" task starts after "User Requirements" task.

Answer Question 2 part (c) to (g) using the Work Breakdown Structure given in Table 2.

Table 2: Work Breakdown Structure

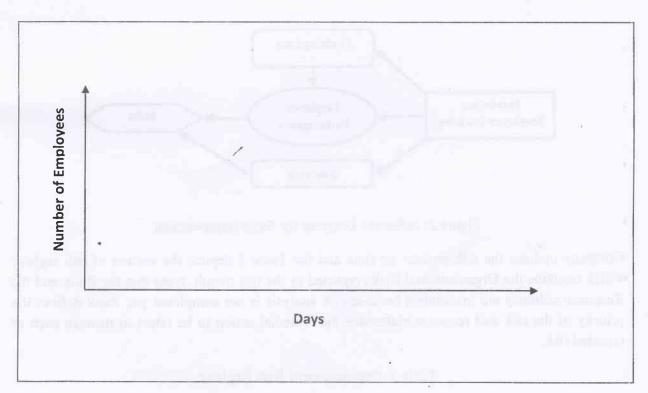

| Activity | Duration (Days) | Precedence | Number of Employees |
|--------------------------------|--------------------|------------|---------------------|
| A: Requirement Analysis | 5 | | 2 |
| B: Test Manual Preparation | 3 | - | 1 |
| C: Training Manual Preparation | 5 | - | 1 |

Question 03

Read the following Case Study carefully and answer the Question 3.

Case Study: ABC Company

According to the Marketing Department Analysis report, it has been revealed that the ABC Company is facing a serious sales drop from the last three months. Further, this analysis declared that this sales drop occurs due to the various consequences of some other departments. Poor quality and high cost materials input to the production by the material department, high attrition and unskilled staff in the manpower department are the major negative effects for the sales drop. In addition to that, low maintenance and obsolete technology used by the machinery department is also indirectly leveraging the problem. The analysis report has further emphasized that the lack of proper research and autocratic decision making of the management are also entertain the sales drop within the last three months. As a solution for the identified problem, the strategic management team of the company has suggested a mitigation plan through Influence diagram as depicted in Figure 2.

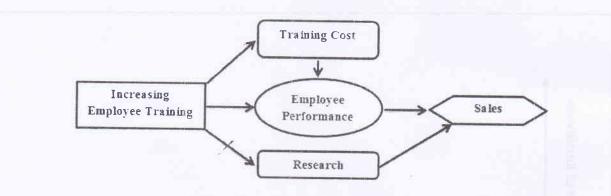

Figure 2: Influence Diagram for Sales Improvement

Company updates the risk register on time and the Table 3 depicts the section of risk register which contains the Organizational Risks reported in the last month. Note that the Rank and the Response columns are incomplete because risk analysis is not completed yet. Rank defines the priority of the risk and response elaborates the remedial action to be taken to manage each of reported risk.

| No | Rank | Risk | Response | Probability | Impact |
|----|------|--------------------------------|----------|-------------|--------|
| R5 | | Inadequate planning. | | 0.95 | High |
| R2 | | Absence of leadership. | | 0.20 | High |
| R8 | | Obsolete platforms. | | 0.55 | Medium |
| R9 | | Low performance employees | | 0.58 | Low |
| R3 | | Poor information distribution. | | 0.29 | Low |

Read the following scenario carefully and prepare a <u>Stakeholder Communication Analysis</u> for the National Highway Monitoring System. (5 Marks)

National Highway Monitoring System - Project Communication Requirements

Project Manager is responsible to email both the implementation specification and monthly progress report to the development team and the client respectively. The scheduled date for sending the progress report to the client will be the second week of every month. Implementation specification is emailed weekly to the development team. Additionally, the team leader has to submit the hard copy of status report to the Project Manager weekly. The hard copy of the training plan will be prepared by the technical writer of the team and is posted to the training subcontractor on 8th August, 2018.
